## EDUCATION

### The University of British Columbia

Bachelor of Science in Data Science

- GPA: 3.8, Dean's List (2022W)

Kelowna, BC

Sept 2021 – April 2025

## EXPERIENCE

### Software Developer Intern

Sept 2023 – Present

The University of British Columbia

Kelowna, BC

- Spearheading the development of a module within a Decision Support System (DSS) designed for processing and displaying CSV data in a React-based table, expected to benefit about 9,000 students with course and study-plan decisions.
- Collaborating with cross-functional teams under Dr Abdallah Mohamed's guidance to fulfil user requirements.

### React Native Developer

Sept 2023 – October 2023

Brokol

Kelowna, BC

- Implemented UI improvements using React Native and TypeScript, including colour scheme adjustments and bottom sheet size optimization, enhancing user experience and leading to a 30% increase in user engagement metrics.
- Gained proficiency in Google Firebase, understanding its role and capabilities within the app's framework.

### Full Stack Developer Intern

July 2023

Lexster Law

New Delhi, Delhi

- Independently developed and deployed [www.lexsterlawdemo.com](http://www.lexsterlawdemo.com) using MERN, Tailwind CSS, Material UI, and Vite on Heroku, showcasing co-founders' requirements and receiving positive feedback from 96% of the review team.
- Improved site performance and user engagement with MVC architecture and RESTful APIs, reducing load times by 40% and increasing user interaction by 50%.
- Streamlined form handling by integrating Formik and Yup, reducing form completion time by 60%. Utilized Postman for API testing, resulting in a 40% decrease in user-reported issues during the review team's testing.

### Data Science Intern

May 2023 – Jun 2023

Consat Orah

Gurgaon, Haryana

- Designed and automated a dashboard using Looker Studio and Google Sheets, displaying JIRA-based metrics for 5 projects and 180 tickets, resulting in a 65% increase in stakeholder engagement.
- Employed K-Means clustering for determining centroids and DBSCAN for outlier detection to identify bus routes from Orah's bus tracking system's data, analyzing over 10,000 data points. Utilized GeoPandas for spatial data manipulation and visualization, along with Folium's "PolyLine" feature to connect centroid points.

## PROJECTS

### UBC Stats Companion | HTML, CSS, JS, jQuery, Bootstrap

- Developed a JavaScript-based and Bootstrap-designed Chrome extension that leverages jQuery and web scraping to enable UBC students to access course statistics from UBC Grades' API and professor ratings from RateMyProfessors.
- Currently has 440+ users and a five-star rating.

### CNN-Based Pneumonia Detection Web App | Python (Flask, Keras, PyTest), GCP App Engine, Bootstrap

- Created a Bootstrap-designed Flask web app for pneumonia detection from X-ray images. Tested with PyTest unit testing.
- Developed a custom CNN with Keras, achieving 92% validation accuracy via image augmentations and hyperparameter tuning using "Hyperband". Successfully deployed the app on Google Cloud Platform's App Engine.

### PlantPal | Swift, SwiftUI (PhotosUI), UIKit, Core ML, Create ML

- Created an iOS app for plant disease identification using a Core ML model, achieving 73% accuracy with user-uploaded images.
- Integrated PhotosUI for image uploads from the user's gallery, enhancing the experience with straightforward image handling.

### iClicker Clone | HTML, CSS, JSP, SQL, Docker

- Collaborated on a team project in an Agile environment to develop a web-based polling platform, applying object-oriented principles of encapsulation and inheritance, along with UML for system design, within an iterative development approach.
- Implemented Test-Driven Development (TDD) using JUnit for unit testing and Docker for streamlined deployment, ensuring reliability and performance.

### Human Activity Recognition Analysis + Web App | NumPy, pandas, Matplotlib, Seaborn, scikit-learn, FastAPI, AWS

- Developed and deployed a FastAPI API on an AWS EC2 instance for predicting anthropometric characteristics and activity classes using KNN Regressor and Classifier pipelines. Created a Gradio web app that queries the API and displays the result.
- Improved accuracy through hyperparameter tuning with GridSearchCV.

## SKILLS

**Languages:** Java, Python, R, JavaScript, TypeScript, SQL, Swift, C, C++

**Data Science:** NumPy, Pandas, Matplotlib, Seaborn, Scikit-Learn, Tableau, Keras, TensorFlow, Prophet, Looker Studio

**Web Development:** React Native, HTML, CSS, Node.js, Express.js, React, jQuery, Tailwind CSS, Material UI, Vite, Axios, MongoDB, Bootstrap, Flask, FastAPI, Gradio, JSP, Email JS, JSON

**Tools, Databases and Cloud:** PostgreSQL, MongoDB, GCP, AWS, GitHub, Postman, Create ML, Docker, Microsoft SQL Server

**Frameworks and Libraries:** GeoPandas, UIKit, SwiftUI, Streamlit, Core ML, JUnit
